***Detailed Action***

This is the Office Action corresponding to amendment filed June 14, 2007.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

***Claim Rejections - 35 USC § 103***

Claims 1, 22, 23, 36 and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over admitted prior art in view of Johnson (Pat No 7,096,536). As understood the invention refers to the use of a rotation unit moveably connected to a hinge to prevent and allow rotation. The structure of the monitor stand being known in the art. The recitation of the rotation unit is so broad that even a nut securing a pin can be read as a rotation unit. The patent to Johnson shows a rotation control unit (16) that prevents and allows rotation. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided a hinge with a control unit as the one shown by Johnson to prevent and allow rotation on a more safe and secure way than a regular pressure hinge does.

***Allowable Subject Matter***

Claims 4—21, 26-35, 37 and 39 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Huang (6,671,928) and Chung (6,163,928) disclose other devices of interest.
